The New Original

The New Original

Give people the tools, and they will build incredible stuff.

That is what it is about, and what it has always been about. We started this journey way back in 1982, creating the world's first modular aluminium trussing system. That invention, and everything that has followed, has been driven by recognising the needs and demands of a fledgling industry that has since become a global phenomenon – the live events. For us, this means facilitating the build and rebuild of literally thousands of structures every year, and the according stories of excitement, emotion and joy that are so fundamentally human. So for us that defines it, the need to innovate, to enable and ultimately to continue working towards our end goal: to help you build incredible stuff.

Some history. And the future.

Our founding shareholders all share a connection, back in the early days of the phenomenon that is aluminium trussing. Pioneers and visionaries, together responsible for countless innovations that have framed the landscape of today's marketplace. A casual discussion in Leeds, UK, brought together a few of those bright minds, separated by the passing of time. They started with a simple question – how would we do this better? Cappuccino's were consumed, and some thoughts were sparked, with the kind of spark that is hard to extinguish. A simple conclusion; what was missing, was passion, and simplicity of purpose that comes with that. Oh, and the right team, a combination of all the experience and lessons learned, with young, dynamic people to drive the future forward. And so the formula for SIXTY82 was discovered...

Bringing together over 100 years of entertainment industry leadership of our shareholders, the company is a British, Dutch and French alliance designed specifically to bring a fresh view in to the market. Headquartered in Drachten, Netherlands, SIXTY82 has every component required to change the way that lightweight structural systems are used. All over again.

Simplicity. By definition, in purchase, in use and in support.

By Definition. In order to do great work, tools need to be a facilitator, not a distraction. They need to work intuitively, be easy to understand yet far reaching in their capability. We call this wide platform modular engineering; behind that we have the strongest technical team in the industry. Their aim is to rationalise products by improving them; reducing inventory, save time and diminish the carbon footprint.

In Purchase. This means that we will have a razor sharp catalogue that is capable of supporting every build: nothing else. In turn, the experience and knowledge of our dedicated SIXTY82 sales centres will work to ensure rapid availability of every component. We fully understand that non delivery could mean no show.

In Use. With form following function and a restless drive to reduce waste, excess and complexity, our products will be better to work with. From our improved load performance and high production accuracy to the world-first RFID integration. We are producing products that are both easier and more reliable in use. This leaves room for imagination and creativity and ensures that your end result will be better than ever before.

In Support. We have learnt over the years that our products can only perform with the right level of support. To that end, we have the strongest technical team in the industry, who are here for you if you need any help, from the start of the project to the very end. They are inspired by working every day to ensure that our partners push the boundaries to do incredible things.

Technical Innovation

Technical innovation is at the heart of what we do. This year, we are delighted to launch with a number of world firsts in the trussing and staging industry. Our commitment is to support our technical team deliver innovations and new product launches every season – all designed into a modular roadmap to allow you to efficiently scale your investment – and build incredible things.

RFID Ready

Together with our partners we have combined multiple new technologies into a borderless product management platform. Our RFID system will allow seamless tracking of products, both physically and in terms of technical and origination data. This will give you the confidence that you are using the right products in the right way, every single time.

TÜV Approved

SIXTY82 is employing some leading figures in the field of temporary demountable structures. These people have been involved since the beginning of this century in developing standards in Europe. Accordingly, all of our products are calculated, independently approved and assessed to the latest standards. Furthermore, as the technical pioneer of many industry leading technologies, SIXTY82 designs its products with integration in mind. This means that technically challenging constructions can be achieved with the same simplicity and peace of mind as the use of individual products.

Clear technical information, available anywhere

With the SIXTY82 app, and our roadmap for RFID integration, we will provide a single support platform which will guide you through the use of our products. This means that you can easily retrieve load, construction and compliance information wherever you are, in a simple and intuitive way. The platform will continuously be updated with new innovated functionalities such as our SIXTYView and the 3D visualiser, as we develop new technologies driven by our users.

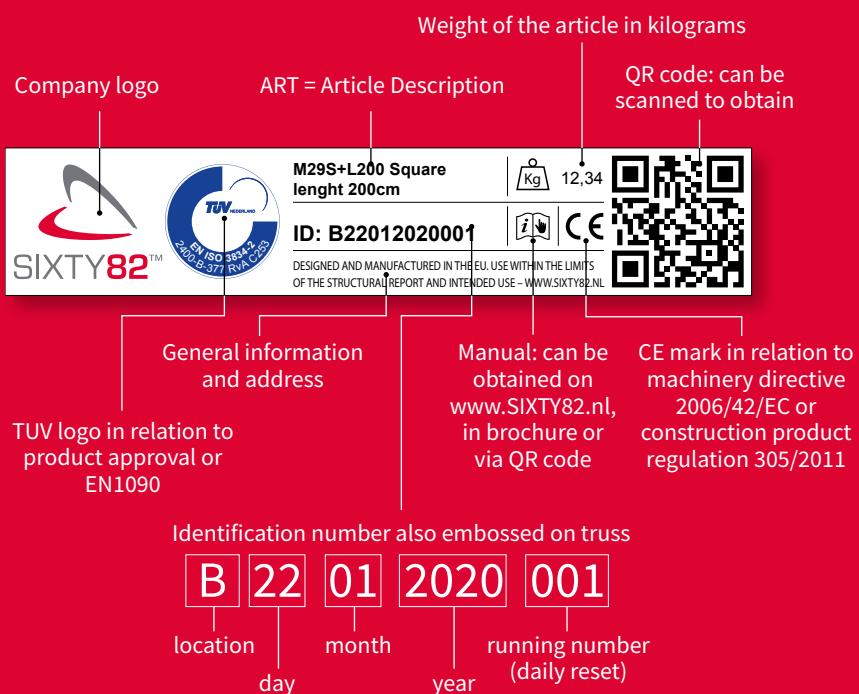

Platform Simplicity

Our promise. Every product will provide solid, reliable service with a simplicity of application. You will get great advice and find a clearer and more focused product range. This means that you will need less different parts in order to achieve more; saving time, space and costs.

AR The **hidden** world behind the page?

Product Personality

In this environment, it is vital that you know both the origin and the capabilities of every product that you work with. However, product specifications, traceability and user data have long been a cumbersome for companies and individuals working in this industry. Until now. We believe that simple, accurate information is a cornerstone of safe building. Accordingly we are proud to launch a suite of tools which centralise data and facilitate easy reference, either physically or digitally, at all times. Our Product Personality system, gives a unique identification to every product and links data about its specific manufacturing process, and TUV certifications. This is unified by an online database of component information and user manuals, and tied to each individual SIXTYTag. Meaning you have multiple ways to get all of the up to date information of the product and its use, anywhere and any time.

SIXTYTag

The functionality of our Product Personality system is further enhanced with the SIXTYTag – which is standard on every section of trussing that we produce. This unique development of RFID technology combines a special tag with specific extrusion and mounting design. As a result it is optimised to maximise reading accuracy. It is used

within SIXTY82 for the management of stock and designed to facilitate open integration with other systems, enabling the growth of digital asset tracking. We have a roadmap for the development of this unique technology with enhanced functionalities such as EN inspection management and global stock with real-time availability.

SIXTYApp

The SIXTYApp is the first database enabled App platform within the trussing and staging industry. It allows instant access to Product Personalities. Meaning that simply scanning the QR code immediately gives both unique and general data about the origin and safe use of the system.

In addition to this, the App has full 3D augmented reality functionality which is aimed at making it simpler to understand the sometimes complex structural forms of trussing systems. If you scan our AR enabled products or constructions with the App, a 3D render will instantly pop up. They can be easily manipulated to engage users and facilitate quick and simple technical discussions. In the future we will use this technology as the foundation of our intelligent online education system, making it easier for you to learn about the safe and creative use of our systems.

🌐 Find complete loading tables on SIXTY82.nl

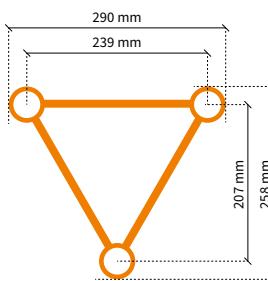

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up, apex-down.
- 2 chords truss to be placed upright, supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.
- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

M29

Service

The request:
you need truss or staging,
and you need it now!

Super quick:
we will get back to you within
24 hours.

Simplicity:
innovative and straightforward
solutions that facilitate, not distract.

High quality:
produced and checked
by a highly skilled team.

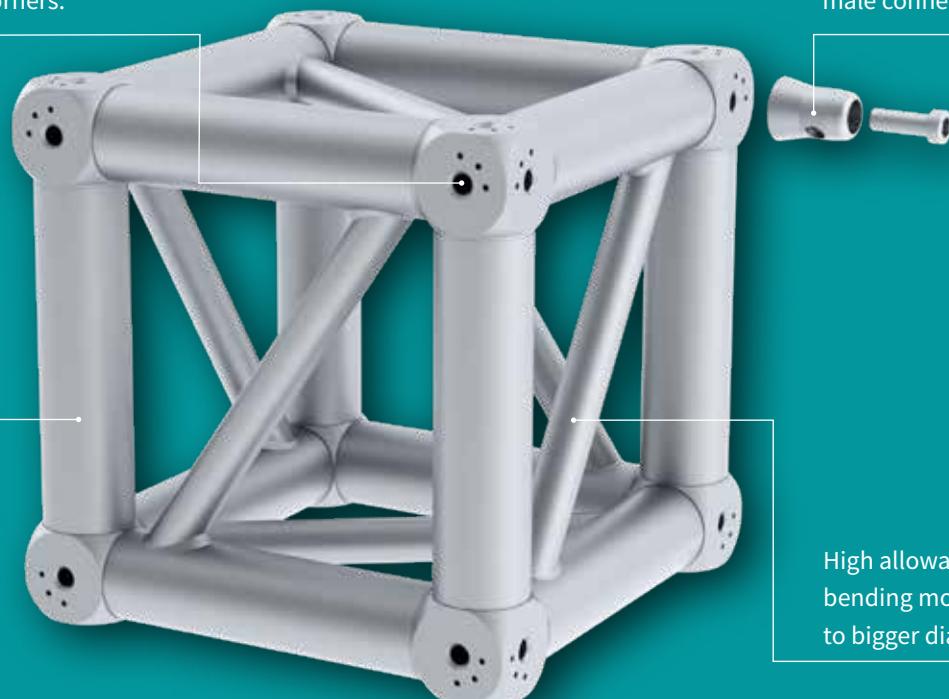

Great support:
we help you every step of the way.

BOX corner **invention evolved**

Locator pin design and
special male connector
will allow much easier user
configuration of box corners.

Higher shear force
capacity due to lower
eccentricity when using
male connectors.

Less components
giving increased
user simplicity
and better value.

Find complete loading tables on SIXTY82.nl

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

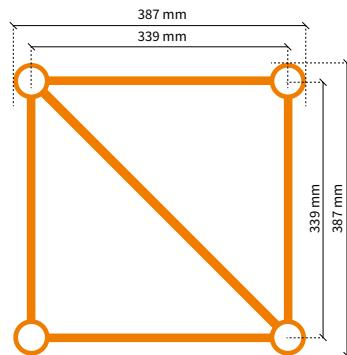

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up, apex-down.
- 2 chords truss to be placed upright, supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.
- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

HANG-ON82

WHY HANG-ON82?

- Alternative for the T-joint
- Flexible in use: can be used on every point in the grid
- Easy to use and assemble
- Can be used in conjunction with box corners and weld corners (spacers or special truss length needed)
- Can be used for ladder, triangle and square truss
- Natural and black finish available
- Load capacity 900 KG

HANG-ON82 IN USE

- 1 The grid is built with **weld corners**: the hang-on needs to be assembled with 30 mm spacers, and an extra piece of 210 mm (or 710 mm) truss needs to be used in the span (spare parts 1, 3 and 4).
- 2 The grid is built with **box corners with M51 receivers** (75 mm): the hang-on needs to be assembled with M52S connectors, and the same length of truss can be used for the span as is used in the grid (spare parts 1 and 2).
- 3 The grid is built with **box corners with M52S connectors**: the hang-on needs to be assembled with spacers, and an extra piece of 290 mm truss needs to be used in the span (spare parts 1, 3 and 4).

WALL ADAPTER82

WHY WALL ADAPTER82?

- Unique design
- The width is the same as the truss
- Adjustable position of clamps
- Can be used upright and upside down
- Suitable for triangle, square and rectangular shaped truss
- Can be positioned on an angle
- Suitable for M29S-T, M39S-T and M39R
- Load capacity 500 KG**

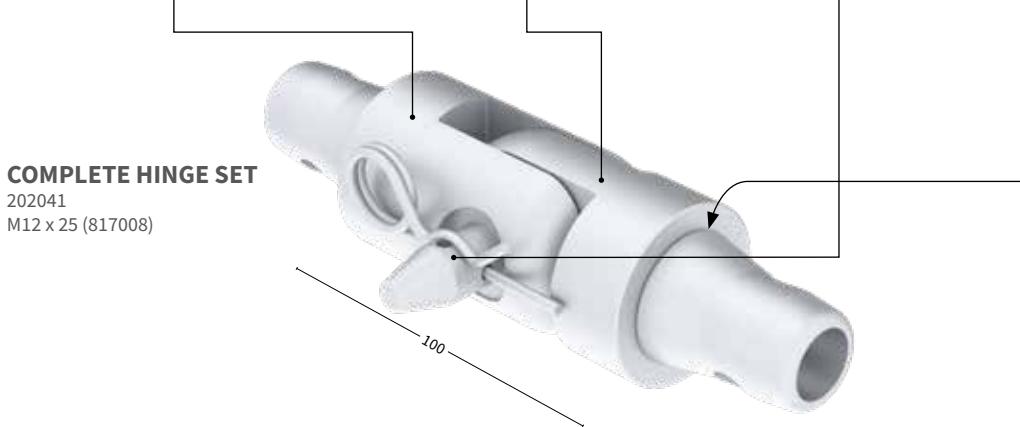

* Connection materials for the wall are not included.

** The individual wall to which the wall adapter will be connected need to be structurally sound to bear the loads.

 Find complete loading tables on SIXTY82.nl

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up, apex-down.
- 2 chords truss to be placed upright, supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.

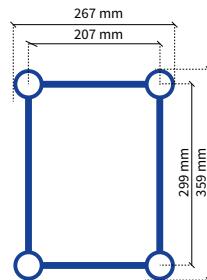

- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

Find complete loading tables on SIXTY82.nl

All loading data is based on calculations per EN-1999-1-1 and the following assumptions:

- Static loads only.
- Spans supported or suspended at both ends.
- Triangle trusses solely used apex-up, apex-down.
- 2 chords truss to be placed upright, supported from top chord and loaded from bottom chord.
- Truss spans can be constructed of elements of different length.
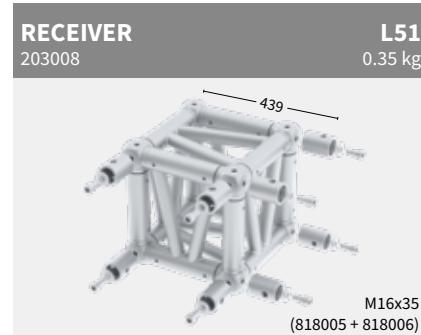

- Interaction between bending moment and shear force considered.
- Self-weight of truss is already considered.
- Assembled truss systems need an individual structural calculation. Please contact SIXTY82 or a structural engineer.
- Read the manual before use.
- Higher loading can be allowed depending on the truss configuration.

Tower Model M

HOW TO?

UNDERSTANDING TOWER LOADING

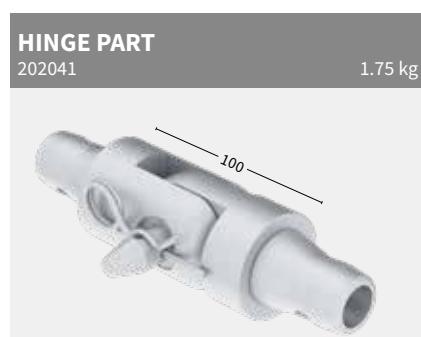

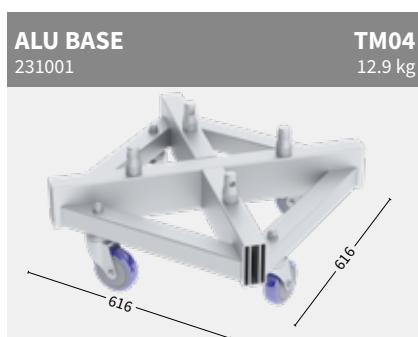

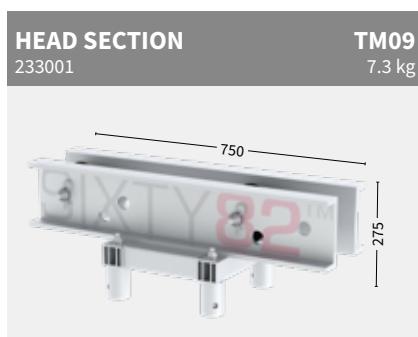

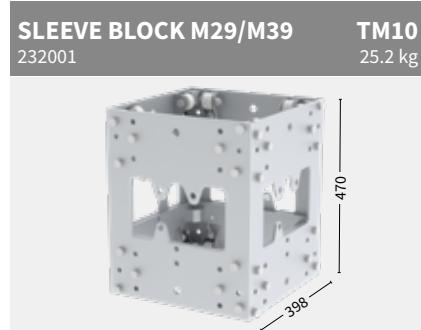

The following variables determine the allowable tower loading:

- Tower length
- Tower cross sectional dimensions
- Dimension of chords
- Method of restraining top and bottom of the tower
- Use of guy wires
- If the tower base is ballasted

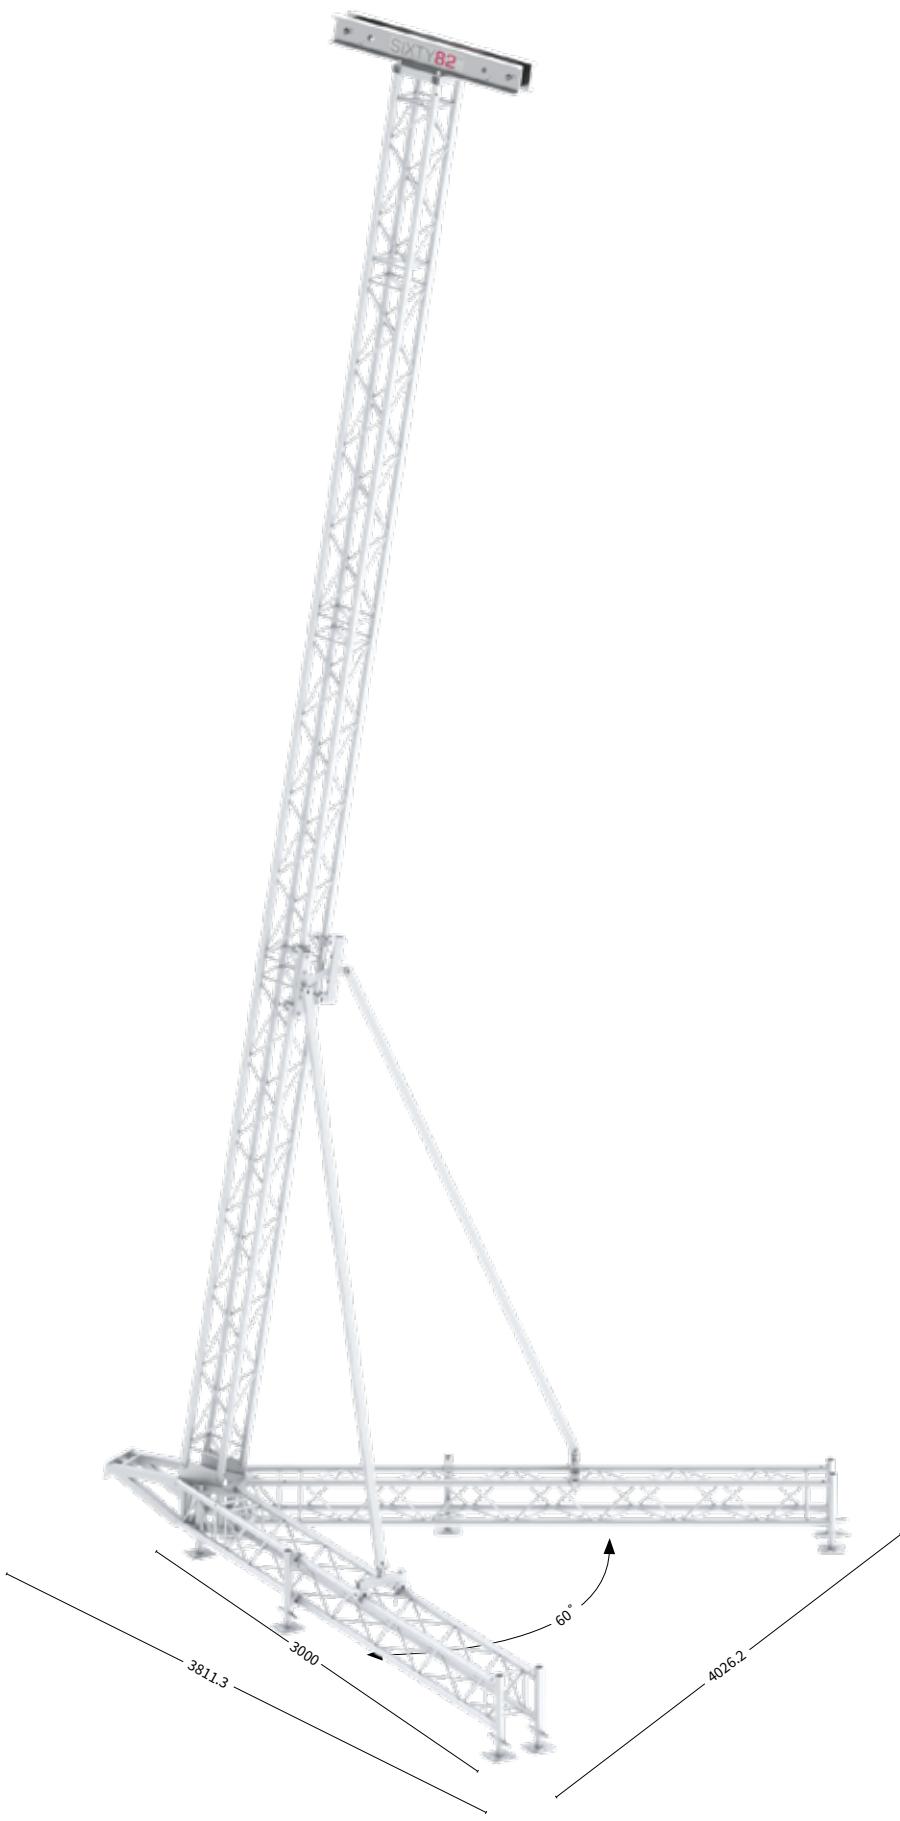

WHY SLEEVE BLOCK PLATED?

- Completely bolted to avoid weakening due to welding
- Lighter weight due to use of special alloys
- Integrated deadhang system
- Deadhang system restrains the sleeve block in 2 directions, therefore optimised for roof systems
- Radiused edges for ease of handling

V-Tower Model M

WHY V TOWER MODEL M?

- Self-Standing tower system to hang PA systems
- Minimal ballast required due to its shape
- Faster to build, compared to similar systems
- Complies with latest EN13814 standard for temporary structures
- Small footprint
- Use of standard M29S trusses
- Lifting help available

TECHNICAL SPECIFICATIONS

- Max load 800 kg H = 750 cm
- Front surface 250 cm²
- Side surface 125 cm²
- Stabilizing profile 50 x 50 x 4 x 4 reinforced
- Max windspeed in service 20 m/s

Trussing Tower

WHY TOWER MODEL L?

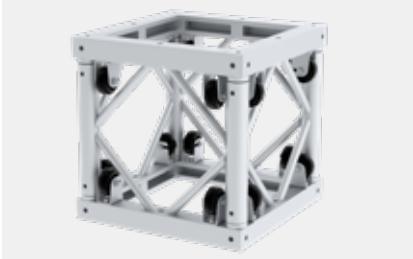

- Light weight sleeve block with minimised welding for optimal strength
- Modular concept allowing multiple configurations
- Tower truss with integrated ladder and diagonal bracing on all sides for optimum strength
- Slim design, less bulky footprint
- Sleeve blocks available for all kind of horizontal truss spans

Multibase Tower

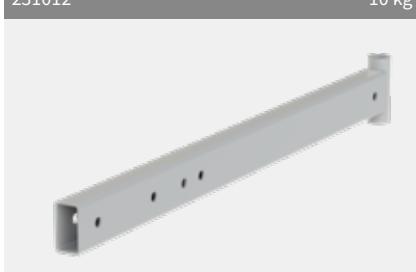

WHY MULTIBASE TOWER?

- Multi usable base for all kind of outdoor structures
- Self erecting by means of chain hoist
- Adapts to many different truss types
- Calculated and proven concept
- Can be used in conjunction with roof systems
- One size fits all head section
- Optional truss head
- Head section comes with multiple suspension points
- Calculated for coastal area (WS4) in Germany

Arc Roof

WHY ARC ROOF?

- Versatile temporary roof structure based on standard trusses
- No obstructing guy wires in sides
- Bespoke corners can be combined with Model M tower sleeve
- Competitively priced
- High loading compared to size
- Easy set-up by hand or material lifts
- Structurally calculated and proven concept
- Full aluminium structure
- Many options for staging or substructure
- Complies with European standards for temporary structures

Sloping Roof

WHY SLOPING ROOF?

- Structural reports for all building sizes available
- No “Baubuch” according German laws required due to building size below 5 m
- Short assembling and disassembling times due to conical coupler system
- Compact size, small transport size
- Maximum safety for audience, technicians and artists, all roof sizes calculated according the latest standards
- Attractive design, allows audience best possible view on the stage

Saddle Roof

WHY SADDLE ROOF?

- Use of **boxcorners instead of bespoke corners**
- **Gable rafter connection form-fit instead of clamps. This is much safer**
- **Gable rafter connection allows much faster set-up**
- **Pinned deadhang system to save time during set up**
- **Less lateral compression braces between rafters required due to use of M39S gable rafters**

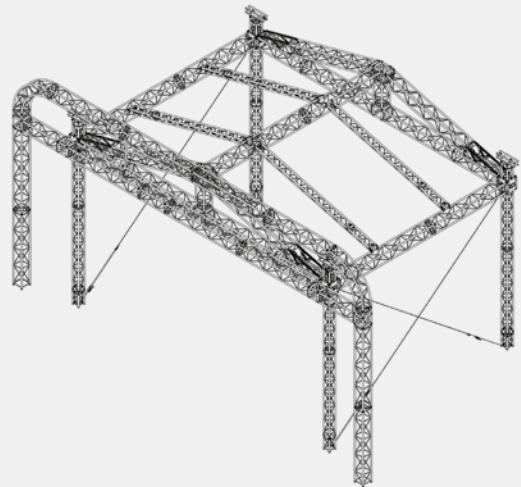

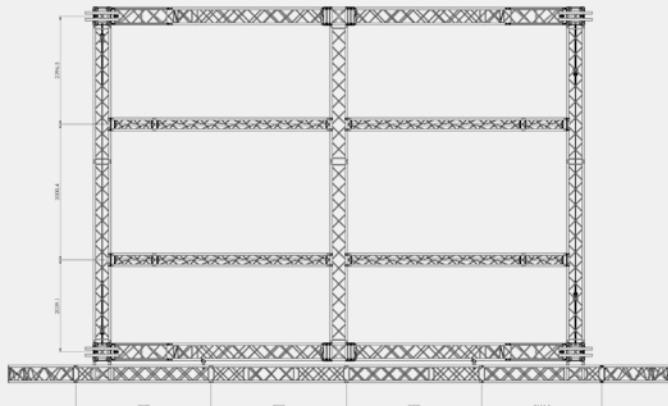

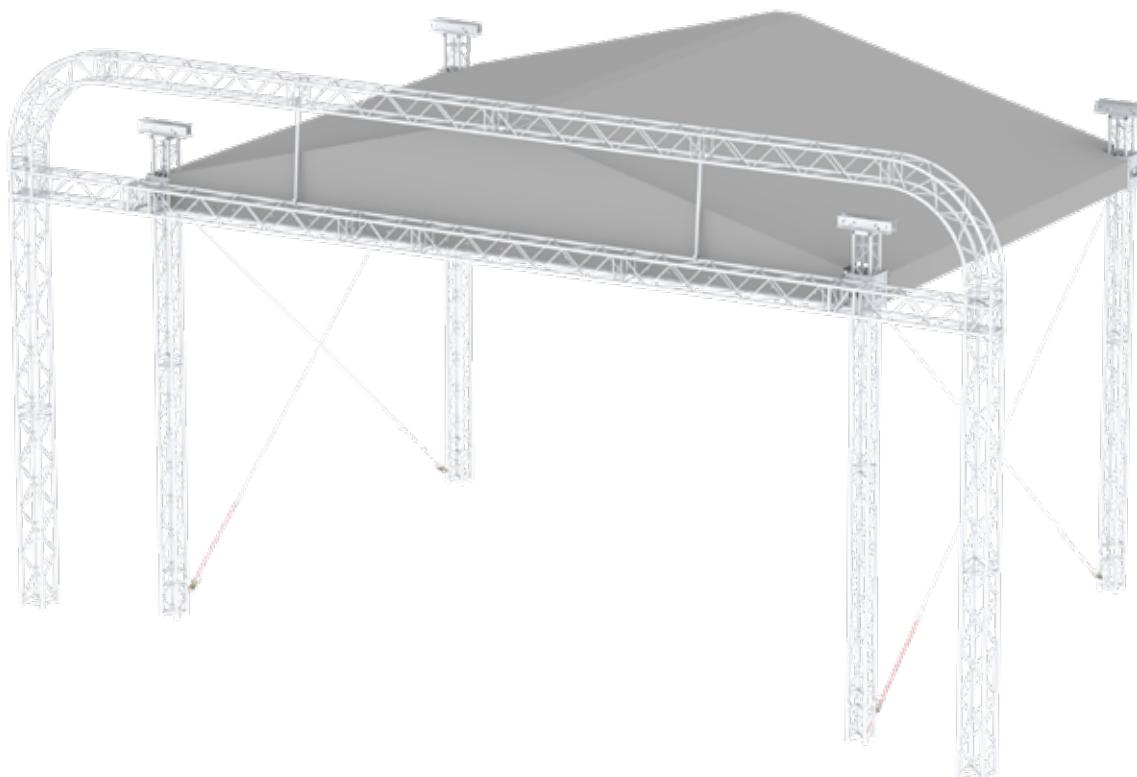

Loading capacity UDL	4482 kg
Loading capacity misc point loads	Depends on configuration
Loading capacity cantilever	2182 kg
Self weight incl. wall canopies	1000 kg (4.5 m ²)
Max peak gust wind speed in-service	20 m/s (measured at 10 m height)
Max peak gust wind speed out-of-service	28 m/s
Max peak gust wind during erecting	14 m/s
Ballast	Depends on configuration. Bespoke ballast bases / layher integration available
Dimensions structure	W10.90 x D7.83 x H9.10*
Dimensions inside for stage platform	10 x 7 m
Trusses	M39S / M29S / M29T
Canopy	Standard: grey / black Optional: transparent / other colours
Staging	Several options possible like aluminium scaffolding system StageFrame82
Structural calculations	DIN-EN 13814 / Euro codes
Miscellaneous	<ul style="list-style-type: none"> • Form fit connection between rafter and grid truss • Use of box corners. No bespoke corners • Auto-release system for wall canopies • Optional side wings • Ground ring or stage intergration for reducing ballast • Intermediate support towers for increased loading • Baubuch on request • M39S gable side rafters to minimise the use of compresion braces • Increased set up times due to lack of clamp connections

* All data is based on calculated set-up. Other options are possible but need to be investigated on a case-by-case basis.

14 x 12 meter

WHY PITCHED ROOF?

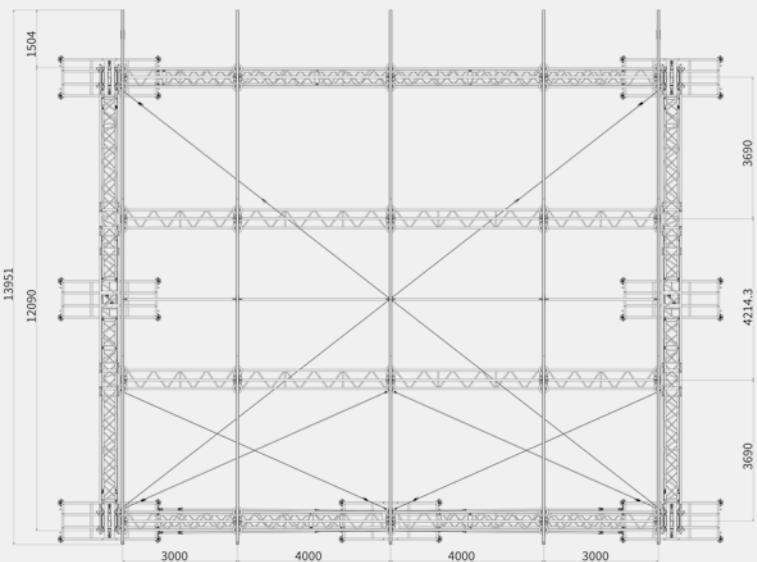

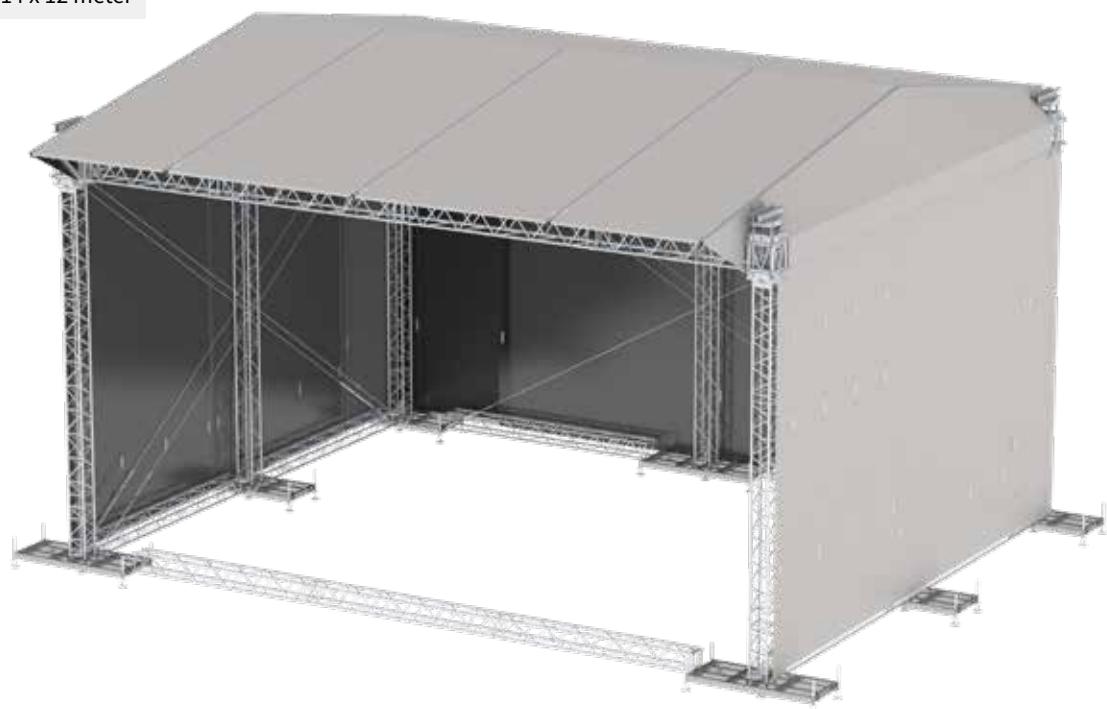

- Hurricane proof design (max 40 m/s)
- Canopies sit in kedar profiles for ease of build
- Auto-release system for wall canopies
- Ground ring for reduced ballast
- Bespoke tower bases for correct integration of ballast
- High load capacity
- Full aluminium structure
- Many options for staging or substructure
- Complies with European standards for temporary structures

Loading capacity UDL	5645 kg
Loading capacity misc point loads	7000 kg
Loading capacity front cantilever beams	2 x 500 kg
Self weight incl. wall canopies	3197 kg
Max peak gust wind speed in-service	20 m/s (measured at 10 m height)
Max peak gust wind speed out-of-service	28 m/s - 40 m/s
Max peak gust wind during erecting	14 m/s
Ballast	Depends on configuration Bespoke ballast bases
Dimensions structure	W15.08 x D13.96 x H9.93
Dimensions inside for stage platform	14 x 12 m
Trusses	M39S / M39TOW / L52S
Canopy	Standard: grey / black Optional: transparent
Staging	Several options possible like aluminium scaffolding system StageFrame82
Structural calculations	EN 13814 / Euro codes
Miscellaneous	<ul style="list-style-type: none"> • Canopies fitted in kedar profile • Auto-release system for wall canopies • Optional side wings • Ground ring for reducing ballast • Intermediate support towers for increased loading • Baubuch on request • Structural calculations per DIN-EN-13814

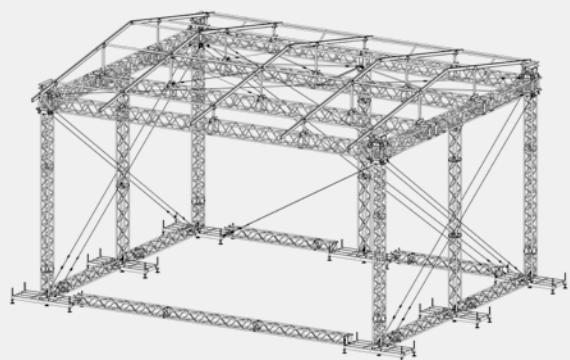

* All data is based on calculated set-up. Other options are possible but need to be investigated on a case-by-case basis.

LED Screen Support

6 x 4 meter

WHY LED SCREEN SUPPORT?

- Versatile LED Screen Support structure based on standard trusses
- Easy set-up due to fixed base structure
- Structurally calculated and proven concept
- Full aluminium structure
- Use of multibase for easy positioning of ballast
- Rafters can be lifted together with erection of tower to save assembly time
- Bespoke head section with integrated brace connection
for fast set up and less bespoke parts
- Possibility to deadhang at ground level which eliminates the need to climb the towers

6 x 4 meter

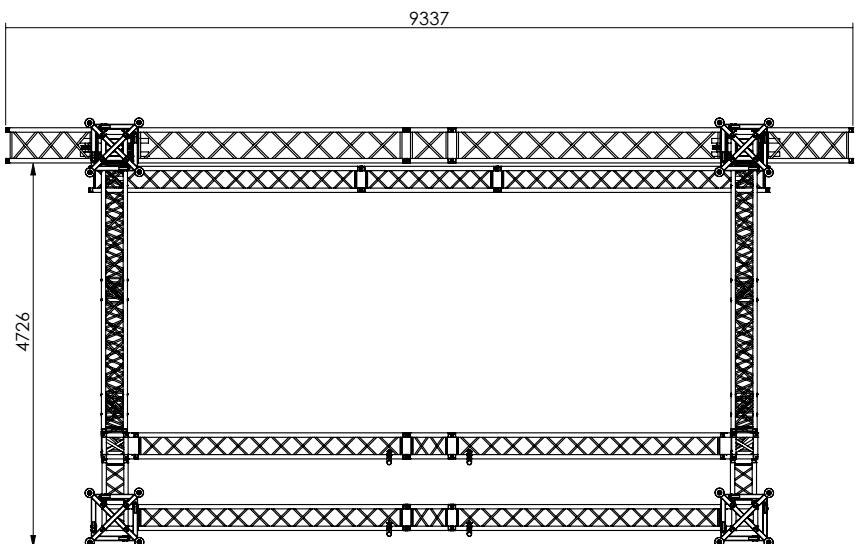

Max screen size	6 x 4 meter
Max PA size front	1.5 m ²
Max screen weight	1500 kg
Max PA weight	2 x 250 kg
Max peak gust wind speed in-service	20 m/s (measured at 10 m height)
Max peak gust wind speed out-of-service	27 m/s
Max peak gust during lifting	8 m/s
Ballast (if screen weight is 1500kg)	2 x 900 kg
Dimensions	See drawing
Trusses	M29S / M29T / M39S

* Above data based on calculated set-up.

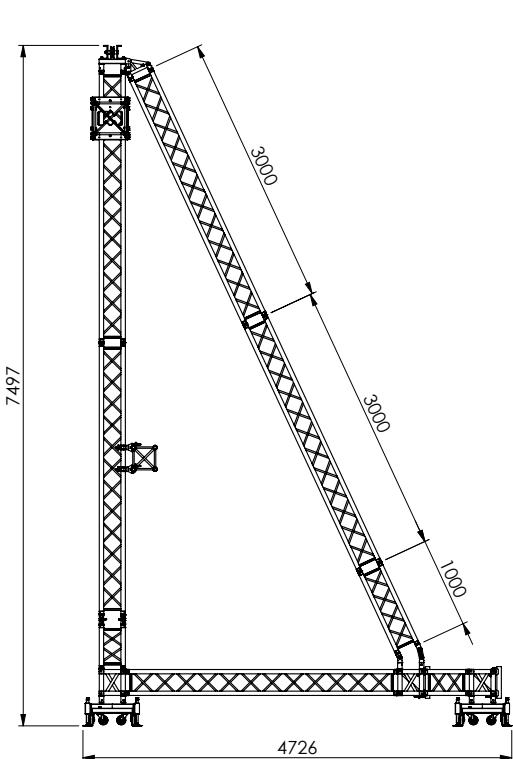

Other options are possible but need to be investigated on a case-by-case basis.

* Calculations per DIN-EN13814:2013 for WS 1-2 in-land in Germany.

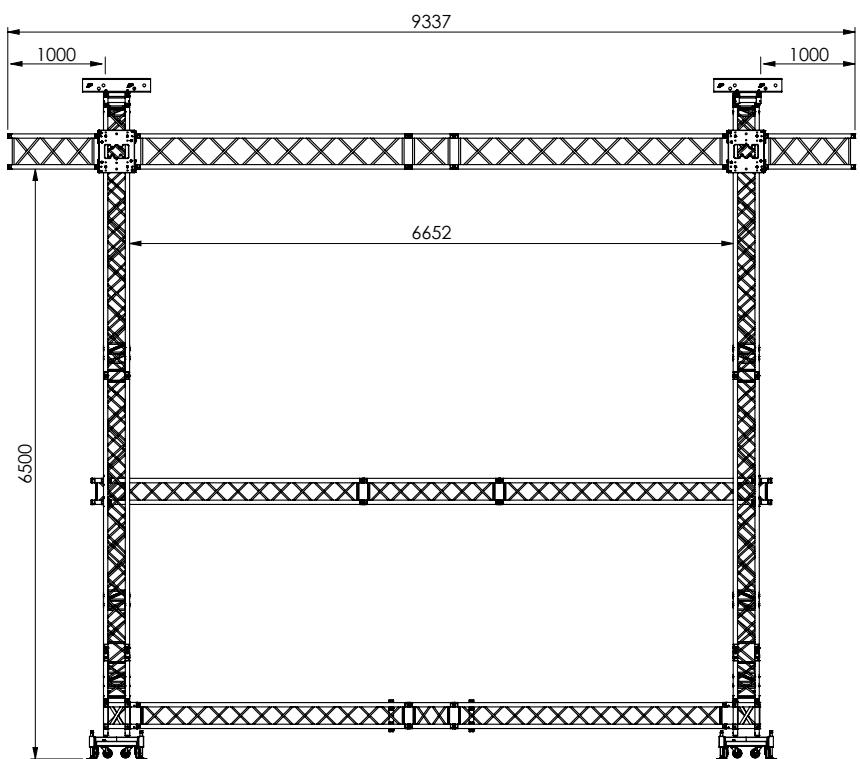

* Baubuch on request.

Black HEXA Plywood / Non slip top

WHY STAGE82 MODEL M?

- Sealed gap between wood and extrusion to avoid water intrusion
- Screwed top plate
- Frame design facilitates much easier handling and pick up by hand
- Scaffolding event beam compatible
- Compatible with existing brands
- Double painted plywood topping
- Easy repair as completely bolted

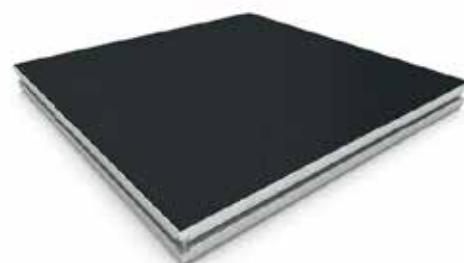

Rectangular 200 x 100 cm

WHY LITE82 TOURING?

- A true second generation event staging product
- 19% less transport volume
- Completely bolted and non welded construction giving strength and accuracy
- Compatible with existing systems
- Protected edge of wood panel and high accuracy joins
- Integrated functionality for attachment of fascias or runway lighting brackets

WHY SUBFRAME B?

- For STAGE82
- For indoor and outdoor use
- Easy to level
- Extremely easy and fast to build and use
- Adjustable in height
- Integration in roof systems (can replace ground ring)
- Made by reinforced profile
- Internal diagonals integrated
- No adapters needed
- Offers space for ballast
- Rigid construction: can be calculated as ballast weight

ETP multi-clamp

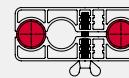

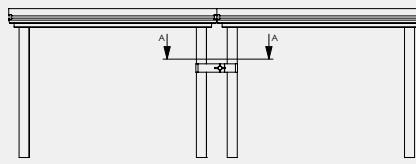

WHY: ETP MULTI-CLAMP

- Most stable design in the market
- Suitable for STAGE82 (48mm diameter legs)
- 1 position for interlocking legs when staging modules are at level
- 1 position for interlocking legs when staging modules are at different levels
- Can be used to connect vertical poles to the legs
- Full aluminium
- Easy to mount

WHY STAIRS ADJUSTABLE?

- Fits to all stage modules of SIXTY82
- Integrated fixation system system
- Steps with anti slip surface
- Full aluminium structure
- Flush out side for ease of transport
- Low self weight
- Use M10x50 (816036 + 816010) for assembly to LITE82

Assembly

STAIRS MODULAR

351018

6.5 kg

Including accessories

WHY STAIRS MODULAR?

- **Fits to all stage modules of SIXTY82**
- **A single step unit, one-size fits all**
- **Bolted together to create stair height up to 140 cm**
- **Ideal for transport: optimised packaging volume due to flat-pack-design**
- **Anti-slip Steps**
- **Loading 500 kg/m²**
- **Protected front edge of steps**
- **Integrated handrail connection**

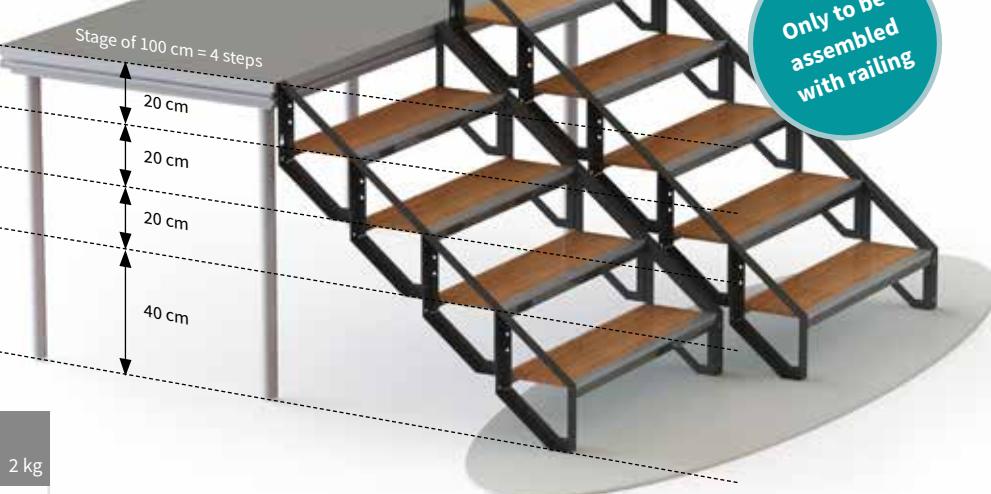

Every element of modular stairs has a total height of 40cm, when mounted properly the height of the stairs will increase with steps of 20 cm.

The formula to calculate the amount of elements needed is:
height of stage in cm / 20 = ... - 1

User information

Suggested slinging methods

Ladder truss

These need special attention for slinging. Stabilisation of the top chord is vital for the load capacity. Only the bottom chord shall be loaded. Other load applications need structural analysis before use.

Slinging shall be applied solely at the main chords, not at the couplers or internal braces unless approved by a chartered engineer. Slinging shall be applied at node point, or as close as possible aside end braces, diagonals, and horizontal cross braces. Slinging equipment shall be made from non-abrasive and fire retardant materials.

For further information, please refer to the SIXTY82 original user manual.
