

# **Topaz Series**

Track & surface mounted fixtures

The Topaz Series forms a beautiful range of fixtures, designed with the valuable input from and in close collaboration with museum lighting designers & technicians, architects, engineers, exhibition designers, CLS distributors and last but not least users from around the globe.

The Topaz Series is our most comprehensive fixture range to date, characterized by a vast array of configurations, ensuring a solution for nearly every lighting requirement. The elegant design is discreet, featuring a gently curved back to create a slimmer profile. All electronics are fully integrated into the fixture, eliminating the need for external driver housings.

The Topaz Series features these models:

- > Topaz Expo
- > Topaz Zoom
- Topaz Profile Zoom Framing / Gobo
- Topaz WallWash
- Topaz ColourFlow\*

Key features the fixtures have in common:

# A choice in different mounting possibilities

In addition to mounting on rails, CLS also offers the "B" mounting option, where the "B" stands for Bolt. This fixture is equipped with an M10 threaded nipple, making it suitable for mounting on a metal ceiling plate, a cable duct, or other locations where rail mounting is not feasible or desirable.

#### Mount fixtures both vertically and horizontally on a rail

The fixtures can be mounted both horizontally and vertically on a rail, thanks to the perfectly balanced center of gravity and multiple locking mechanisms. Both the rotation point in the adapter and the fixture's head on the bracket can be securely locked.

## Unparalleled dim and control options

CLS is renowned worldwide for its innovative lighting control solutions, offering designers endless opportunities to integrate lighting into thematic, interactive environments.

#### Roto Dim®

The Roto Dim® system once again emphasises CLS' position as an innovator and leading global player.

Roto Dim® introduces a completely new way of dimming. It combines the ease and speed of analog potentiometer with the precision of digital dimming. With the detachable magnetic potentiometer, you can dim to 0.01%. The digital potentiometer offers endless rotation, making the resolution extremely high. This high resolution makes 1 Lux accuracy easily achievable. A smart algorithm ensures fast adjustments when rotating quickly and finer control when rotating slowly. Once the magnetic potentiometer is removed or no changes have been made in a period of 10 seconds, the chosen dimming level is stored in memory.

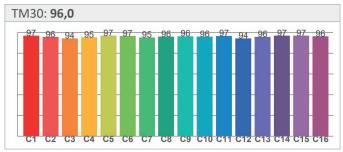

<sup>\*</sup>Expected 2025

### Light quality

Just like the Jade and Focus Series, the Topaz Series offers exceptional light quality. Our light sources score remarkably well, not only in terms of CRI but also in more advanced reports like TM30 and CQS. Additionally, the light beams are beautifully even, with soft edges. The Topaz Profile Framing provides sharply defined projections without the typical "blue line" effect seen in many LED profile fixtures.

Topaz Expo 3000K CRI98

## CLS offers an extensive range in light sources

CLS provides a wide selection of light sources, prioritizing optimal colour rendering. Should you not find your preferred light source among the extensive options, feel free to contact your local CLS supplier. We may be able to include your desired light source in our portfolio (MOQ applies).

A small selection of available light sources:

- White light in 2700K, 3000K, 3500K & 4000K with a CRI up to ~98
- > Tunable White LED modules in 1800K-4000K and 2700K-6500K with a CRI up to ~98
- > Colour changing RGBW and RGBA LED modules
- > Dim To Warm in 3000K-1800K with a CRI ~90

# Accessories for every application

For the Topaz Series, a substantial number of accessories is available. You can mount these in a matter of seconds via the quick-click system. Snoots can be built up in multiple segments to the desired length, containing multiple accessories.

Additionally, a honeycomb, filter accessory holders, elliptical beam filters and a rotatable barn door are available.

#### **Variants**

On the following pages we will give you an overview of the different variants of the Topaz Series, with a short description of each model.

### **Topaz Expo**

The Topaz Expo makes use of high-quality optics that provide an even light beam. Optics can be changed in seconds, allowing lighting technicians to quickly make adjustments on-site. Optics are available in 5 different variants. Using the optional beam shaper, you can even expand the number of beam angles.

Topaz Expo

The optics are available in 12°, 14°, 25°, 35° or 55° (applicable when you choose Bridgelux LED modules). When you opt for Xicato LED modules, the beam angles will get wider. For more information, you can find everything you need concerning photometric data on our website. In short the Topaz Expo delivers a relatively high light output at an exceptionally competitive price.

## **Topaz Zoom**

With a zoom range of 9° - 58°, the Topaz Zoom is the ultimate lighting tool for museums, galleries, and experience centres. Despite a maximum power consumption of just 15 Watts, its highly effective optical system provides a light output sufficient for most museum applications. It offers an even light beam, with soft edges.

The various control options offer endless possibilities for a perfect integration in any museum environment. In particular, the DMX and Roto Dim variants offer extremely accurate dimming possibilities to ensure that even the most delicate artefacts and paintings can be optimally illuminated.

The Roto Dim variant uniquely combines the ease of use of analogue potentiometer dimming with the extremely accurate dimming to particularly low levels that is characterised by digital dimming systems. The removable potentiometer is an absolute novelty and once again fully lives up to CLS' reputation as an innovator.

For environments where sensor-controlled lighting conditions are required, CLS offers the Casambi variant, where we can offer our own developed sensors that are integrated into a museum track fixture. CLS even offers a variant where the Casambi control protocol and Local Dim potentiometer dimming are integrated into 1 track adapter.

# **Topaz ColourFlow**

For environments where subtle changes in ambiance or coloured accents are desired, the Topaz ColourFlow\* is the ideal solution. With interchangeable optics, this fixture offers great creative freedom for on-site changes.

RGBW variants are recommended for creating base colours and pastels, while RGBA options are available for deeper, more saturated colours. Several Tunable White and Dim To Warm versions are also available.

Its sharp price point and elegant and aesthetically pleasing design make the ColourFlow Series the perfect choice for a wide range of environments, from museums to leisure spaces like restaurants, lounge bars, clubs, concert halls, bowling centres, and theaters.

# Topaz Profile Zoom Framing / Gobo

Achieve razor-sharp framed projections with the unique optics of the Topaz Profile. After testing hundreds of lens combinations, our optical experts have created a system that balances high projection quality with high output efficiency.

The projection quality is unprecedentedly high thanks to the use of no less than 8! lenses. Adjusting the zoom and focus range is quick and accurate using the rotating rings on the fixture.

The Profile is equipped with a zoom optic, which gives you considerably more options for finding the right positioning. The zoom range is 25° - 40°. Thanks to the extensive lens system, the effective light output is particularly high and in practice it will beat many fixtures with a higher power consumption in terms of light output. Gobo projections can also be made razor-sharp thanks to the ingenious optical system.

An accessory holder is also available for the Topaz Profile, which, unlike the other Topaz variants, does not work with a click system, but can be screwed onto the front of the fixture using a screw construction.

### Topaz WallWash

With the arrival of the Topaz WallWash, the wishes of many lighting designers are fulfilled. We regularly hold sessions with lighting designers to discuss and evaluate their wishes. A continuously recurring request was for a sound wall washer.

Designing a high-quality wall washer is no easy task. Almost all standard solutions entail specific problems. CLS has been able to overcome all common issues with the development of the Topaz WallWash.

The Topaz WallWash is characterized by a particularly even beam with a very limited intensity difference in the light image. Thanks to an ingenious optical invention by the CLS R&D team, the Topaz WallWash offers beautifully framed straight beams on the sides, making it easy to create an even image across a wall.

To minimize unwanted annoying scattering of the light on the ceiling and on the floor, the Topaz WallWash is designed with an ingenious top-hat, with which illuminators can variably determine the "cut off" of the light beam. The Topaz WallWash is available with the following control methods:

- Casambi
- > DALI
- > Non Dim
- > Mains Dim
- Local Dim + Casambi

# Designed and made in the Netherlands

An investment in CLS fixtures means investing in quality and certainty for a realistic price. In addition to a 5-year full warranty on all components, we offer a 10-year after-sales warranty on components! All software and electronics are developed in-house. This allows us to upgrade our fixtures to meet customer requirements for years to come. With over 500,000 components in stock, we are able to service fixtures for an extremely long time.

Thanks to continuous investments in an extremely efficient production method in combination with a particularly flat organization, CLS is unbeatable in terms of price/quality ratio. It is not without reason that countless museums worldwide have made CLS their first choice. The lighting brings stories to life, emphasizes exhibitions, accentuates vulnerable artefacts and guarantees the authenticity and durability of the collection.
